

Press release

Korrika *Lab*

A thoroughly enduring experience.

With this new endurance saddle, Jean-Michel Devoucoux, the Basque saddle maker, is allowing riders to go all the way to the end of the race freely. Thanks to its new exclusive Dynamick® saddle tree, your horse's back, forequarters and hindquarters are completely respected. The combination of four innovative materials, vegetable-tanned leather, neoprene foam, carbon fibre and fibre glass, provide a precise and comfortable solution to the challenges created by sweat and friction.

With the Korrika Lab saddle and its accessories, the horse and rider combination can focus on the distance, Devoucoux will take care of the rest.

● Technical Characteristics

Saddle tree: its Dynamick® saddle tree boasts an anatomical seat cut in 2 parts.

This opening of the seat provides freedom of movement for the horse's back and relays information about this mobility to the rider. It also leaves the horse's back unencumbered.

Panels: the unique shape and structure of the panels increase the bearing surface and decrease the average pressure on the horse's back. The design and the materials used allow the contact between the saddle and the horse to be optimised and improve the saddle's stability over long periods of time.

Flaps: a streamlined design, whose slim flaps provide closer contact with the horse and bring maximum lightness to the saddle.

The combination of 4 innovative materials: vegetable-tanned leather, neoprene foam, carbon fibre and fibre glass, provide a precise and comfortable solution to the challenges created by sweat and friction, while bringing lightness and suppleness to the saddle.

Dynamick®
Saddle tree

● Weighing 3,3kg

It meets the discipline's requirements as a light and functional saddle

● Mixed saddle

(gallop and uphill)

Available in calfskin or nubuck. Colours: Havana brown or Black, colour customisation option.
Size: S1, S2 or S3 / made-to-measure. Price: from €3,950 including tax

● 3 accessories for optimal use

Comfortable stirrup leathers: slim, lightweight design holds the leg firmly in place

● **Neoprene rug** designed to allow weight to be added when you need it: even distribution of weight while leaving your horse's back unencumbered.

● **Neoprene lower elastic girth** allowing your horse to breathe more easily, offset buckle for greater saddle stability. Easy upkeep.
